

I am AGAINST Docket 03-104, Broadband over Power Line.

Interference will occur to many household AM radios and other low frequency communications such as ham radio, CB and part 15 devices (such as baby monitors and even home wireless medical devices).

Ham radio and CB stations emitting legal levels of RF in their daily operations will interfere with BPL data communications.

As an alternative, I feel broadband cable and DSL/telephone lines are a clean method and should be encouraged. Adding a third system that threatens the complete HF radio spectrum is not sensible at all.

Thank you for your consideration
